

UPDATE: Mark Your Calendar: FSIS Webinars on New Public Health Information System (PHIS)

FSIS will host a series of webinars to introduce a new FSIS comprehensive data system called the Public Health Information System (PHIS) as part of its effort to collect, consolidate and analyze data.

The presentations will be an overview of PHIS and cover three separate topics: what it means to owners/operators of domestic establishments, how it will affect export certifications and requirements for import certification.

NAMP members are encouraged to participate in the webinars to better understand the new FSIS system, which will begin implementation this year.

Each webinar topic is offered twice. To participate in these webinars, join directly using the links and call-in information provided. ***Canceled dates will be rescheduled**
